

Paris, 06 February 2026

CIC CIB co-arranges the financing of a major wind farm project in France alongside TTR Energy.

As part of the HSR project, structured through a co-arrangement, a €240 million senior bank financing has been secured to fund the construction of a wind farm located in the Ardennes department (Grand Est region), across the municipalities of Chaumont-Porcien, Hannogne-Saint-Rémy, Rémaucourt, Seraincourt, Renneville and Sévigny-Waleppe. Structured with the support of Alaïa Advisory, a financial advisor dedicated to the energy transition, and held within the Hexagon Renewable Energy investment vehicle managed by TTR Energy, the project will comprise 22 wind turbines with a total installed capacity of 150 MW. The wind farm is expected to generate approximately 350 GWh of electricity annually. Construction is scheduled to begin in the first quarter of 2026, with commercial operations expected in November 2027.

This project fully reflects Crédit Mutuel Alliance Fédérale's commitment to supporting the energy transition and the modernization of renewable energy generation infrastructure in France.

This new financing also represents a significant milestone for TTR Energy, enabling further progress in the development of its wind portfolio in France and reinforcing its position as a leading player in the development of efficient and sustainable renewable energy infrastructure nationwide.

About TTR Energy

Founded in 2008, TTR Energy is an investor, developer and operator of renewable energy projects. Over the years, TTR Energy has secured financing and delivered the construction of 42 wind power projects, representing more than 1 GW of installed capacity and over €1.8 billion in total investment value. Based in Brussels and Reims, its lean, multidisciplinary team is involved across the entire value chain, from project identification and development to optimization, financing, construction and asset management in the renewable energy sector.
